Paul has 20 years of experience with multi-family housing, retail, major transportation, commercial, and institutional projects. He has provided a variety of services including design development, document production, project management, and construction administration.

His experience includes managing and coordinating various team members including electrical, mechanical, structural, traffic, IT and security for both public and private projects. He understands and is familiar with the various design standards and criteria of public clients.

Since joining OAC, Paul specializes in the design and investigation of building enclosure systems. Paul's versatility and depth of knowledge makes him a valuable team member.
