

ROBIN KOTULKA, PE, LEED AP Associate

Education

BAE, Architectural Engineering
Pennsylvania State University,
2000

Registrations

Professional Engineer
Washington, 2006

Certifications

LEED Accredited Professional
Operations and Maintenance

LEED Accredited Professional
Building Design and Construction

Affiliations

Seattle Building Enclosure Council
(SEABEC) - Secretary

Construction Specifications
Institute (CSI), Puget Sound
Chapter

Presentations

2010 Fall Client Workshop,
Department of General
Administration,
Engineering and Architectural
Services

Robin is a professional engineer with over 10 years of experience in the design and investigation of building enclosure systems. Her expertise ranges from diagnosing failures to the design of new enclosure systems.

Joining OAC in 2005, Robin has worked with owners, developers, architects, and contractors to create effective solutions for a variety of new and existing buildings. For new construction, she works with the project teams to design and construct enclosures right the first time. For existing buildings, she investigates to determine the source of failures and develops long-term repair solutions. Her unique background in both forensics and new construction has given her a comprehensive understanding of building enclosure systems including roofing, exterior walls, windows, and waterproofing.

Prior to joining OAC she worked in forensic engineering and restoration while living in New York City and Washington D.C.

Practice Areas

- Building enclosure design
- New enclosure design review
- Existing enclosure repair
- Construction observations
- Building enclosure commissioning

Representative Projects

New enclosure design

- Rainier Building at Pierce College Fort Steilacoom, Lakewood, WA
- Salish Hall at Green River Community College, Auburn, WA
- Forks High School Addition, Forks, WA
- Home Plate Center, Seattle, WA
- Ruby Condominiums, Seattle, WA

Existing enclosure repair

- Cascade Building at Pierce College Fort Steilacoom, Lakewood, WA
